PROCESS/START-UP RECOMMENDATIONS

### Barrel Temperatures

<table>
<thead>
<tr>
<th>Nozzle</th>
<th>C4</th>
<th>C3</th>
<th>C2</th>
<th>C1</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>400°F / 200°C</td>
<td>420°F / 210°C</td>
<td>390°F / 200°C</td>
<td>355°F / 180°C</td>
</tr>
</tbody>
</table>

For harder to fill parts temperatures may have to be increased. Keep lower temperatures in the rear zones to allow venting through the hopper.

### Melt Temperature

Maximum temperature with a hand pyrometer should be 365°F to 446°F (185°C to 230°C).

### Mold Temperature

Typically 80°F to 120°F (27°C to 49°C).

### Injection Pressure

The preferred range is 50 to 60% of machine capacity. Pressure should be sufficient to fill the mold without hesitation or flashing.

### Holding Pressure

Setting should be lower than boost pressure with a minimum amount of time to prevent over-packing of the part.

### Injection speed

Slow to medium speed to prevent excessive shear on the material.

### Cushion

Maintain at 10-20mm to provide enough material for consistent parts.

### Decompression

Use only when necessary to prevent nozzle drool.

### Screw RPM

Screw should stop 1 to 2 seconds before mold open. A lower RPM is preferred for mixing and uniform melt temperature.

### Drying

Material should be dried for a minimum of 2 hours and a maximum of 4 hours at 180°F (82°C).
