For harder to fill parts temperatures may have to be increased. Keep lower temperatures in the rear zones to allow venting through the hopper.

**Melt Temperature**
Maximum temperature with a hand pyrometer should be 374º F to 410º F (190º C to 210º C).

**Mold Temperature**
Typically 104º F to 122º F (40º C to 50º C).

**Injection Pressure**
The preferred range is 50 to 60% of machine capacity. Pressure should be sufficient to fill the mold without hesitation or flashing.

**Holding Pressure**
Setting should be lower than boost pressure with a minimum amount of time to prevent over-packing of the part.

**Injection speed**
Slow to medium speed to prevent excessive shear on the material.

**Cushion**
Maintain at 10-20mm to provide enough material for consistent parts.

**Decompression**
Use only when necessary to prevent nozzle drool.

**Screw RPM**
Screw should stop 1 to 2 seconds before mold open. A lower RPM is preferred for mixing and uniform melt temperature.

**Drying**
Material should be dried for a minimum of 2 hours and a maximum of 4 hours at 212º F (100º C).
