For harder to fill parts temperatures may have to be increased. Keep lower temperatures in the rear zones to allow venting through the hopper.

Melt Temperature
Maximum temperature with a hand pyrometer should be 400° F to 450° F (204° C to 232° C)

Mold Temperature
Typically 90° F (core) to 120° F (cavity) (32°C to 49°C)

Injection Pressure
Allow 10% over max fill pressure so as not to limit injection speed

Holding Pressure
Normally 50-60% of max fill pressure

Injection speed
1 to 3 inches/second

Cushion
Maintain at .25-.5” to provide enough material for consistent parts.

Decompression
Use only when necessary to prevent nozzle drool.

Screw RPM
Screw should stop 1 to 2 seconds before mold open. A lower RPM is preferred for mixing and uniform melt temperature.

Drying
Material should be dried for a minimum of 2 hours and a maximum of 4 hours at 212° F (100° C).
