BEB-G
START-UP RECOMMENDATIONS

**Blow Molding Polypropylene**

<table>
<thead>
<tr>
<th>Nozzle</th>
<th>C4</th>
<th>C3</th>
<th>C2</th>
<th>C1</th>
</tr>
</thead>
<tbody>
<tr>
<td>420° F / 215° C</td>
<td>440° F / 225° C</td>
<td>430° F / 220° C</td>
<td>400° F / 205° C</td>
<td>390° F / 200° C</td>
</tr>
</tbody>
</table>

Keep lower temperatures in the rear zones to allow venting through hopper.

**Melt Temperature**

Maximum temperature with a hand pyrometer should be 440° F to 530° F. (226° C to 276° C)

**Mold Temperature**

Typically 80° to 110° F. (27° C to 43° C)

**Injection Pressure**

The preferred range is 20 to 60% of machine capacity. Pressure should be sufficient to fill the mold without hesitation or flashing.

**Holding Pressure**

Setting should be lower than boost pressure with a minimum amount of time to prevent over-packing of the part.

**Injection speed**

Slow to medium speed to prevent excessive shear on the material.

**Cushion**

Maintain at 5-10mm to provide enough material for consistent parts.

**Decompression**

Use only when necessary to prevent nozzle drool.

**Screw RPM**

Screw should stop 1 to 2 seconds before mold open. A lower RPM is preferred for mixing and uniform melt temperature.
