START-UP RECOMMENDATIONS

Polypropylene for Interior Parts
(High Flow - High Impact)

<tr>
<td>400° F / 200° C</td>
</tr>
</tbody>
</table>

For hard to fill parts the temperatures may have to be increased. Keep lower temperatures in the rear zones to allow venting through hopper.

**Melt Temperature**
Maximum temperature with a hand pyrometer should be 365° F to 440° F. (185° C to 226° C)

**Mold Temperature**
Typically 80° to 110° F. (27° C to 43° C)

**Injection Pressure**
The preferred range is 20 to 60% of machine capacity. Pressure should be sufficient to fill the mold without hesitation or flashing.

**Holding Pressure**
Setting should be lower than boost pressure with a minimum amount of time to prevent over-packing of the part.

**Injection Speed**
Slow to medium speed to prevent excessive shear on the material.

**Cushion**
Maintain at 5-10mm to provide enough material for consistent parts.

**Decompression**
Use only when necessary to prevent nozzle drool.

**Screw RPM**
Screw should stop 1 to 2 seconds before mold open. A lower RPM is preferred for mixing and uniform melt temperature.
